## EDUCATION

---

### Johnson County Community College

May 2027

CS coursework; transferring to a four-year university

Cumulative GPA: 3.84/4.0

*Relevant Coursework: CS 205, CS 210, CS 211, CS 255*

---

## PROJECTS

---

### Student Partner Finder App

August 2025 - September 2026

- Developed a full-stack student partner-matching platform using React, FastAPI, and MySQL, with JWT-based user authentication
- Designed a real-time match notification system using long-polling and per-user Asyncio queues, eliminating the need for constant client polling
- Architected a unified FastAPI backend with domain-based routing, paired with a React frontend built around a centralized API layer and shared state via React Context

### Library Management System

July 2026 - September 2026

- Built a Java-based library management system using object-oriented design principles, including interface-based polymorphism and custom exception handling
- Modeled system behavior with enum types to represent book statuses and transaction states, improving code clarity and reducing invalid state bugs
- Debugged and resolved core logic issues, including a double-lookup bug and uninitialized field errors, to improve system reliability

## SKILLS

---

**Languages:** Python, Java, JavaScript

**Framework & Tools:** FastApi, NextJs, React, Spring Boot, MySQL, Tailwind CSS, HTML
